

ECONOMIC DEVELOPMENTS DURING JANUARY-SEPTEMBER OF 2000

OVERVIEW

The first nine months of 2000 were characterised by a strengthening in economic activity which was reflected in the performance of most of the sectors of the economy. The main stimulant behind the improvement in economic activity was, again, the sector of tourism, with both tourist arrivals and revenue experiencing substantial increases. The sector of financial services also expanded significantly in the period while at the same time the manufacturing and construction sectors showed signs of recovery. The acceleration in overall economic activity had, as expected, a small favourable effect on the labour market with the number of registered unemployed declining marginally to 3,5 per cent of the economically active population. Exports of goods experienced a large increase, in the process more than compensating for the decline of the corresponding period of 1999. The deficit on the current account continued to grow due to the even larger increase in imports.

The most unfavourable development that characterised the first nine months of the year was the acceleration in the inflation rate, which reached 4,3 per cent, as against 1,3 per cent the year before. This was mainly the result of both external and domestic factors, mainly of a temporary nature, which are, hopefully, not expected to persevere in the near future. On the monetary front, the measures taken by the Central Bank to keep money supply growth under control and put a rein on inflation, were quite successful, as total liquidity slowed down. With respect to public finance developments, the fiscal deficit showed a large reduction as the growth in public revenue more than offset the growth in public expenditure, largely reflecting the successful implementation of the government's fiscal consolidation plan.

THE DOMESTIC ECONOMY

The agricultural sector of the economy was hit by an adverse supply shock, which was the result of the unfavourable weather conditions and particularly the prolonged drought. This situation resulted in the decline of the volume index of total agricultural production, which fell by 14,2 per cent during the period January-September 2000, as against an increase of 8,4 per cent in the corresponding period of 1999. In particular, crop production declined by 26,4 per cent, compared with an increase of 14,2 per cent during

the first three quarters of 1999. Livestock production experienced a deceleration and grew by 1,3 per cent in the first nine months of the year, compared with an increase of 2,0 per cent in the same period of 1999.

Table 1
Developments in Selected Indicators
(% change over the previous year)

	January - September		
	1998	1999	2000
Agriculture			
Volume index of total production	14,3	8,4	-14,2
Crop production	30,9	14,2	-26,4
Livestock production	0,1	2,0	1,3
Manufacturing			
Volume index of total production	0,8	0,3	n/a
Food, beverages & tobacco	2,7	2,9	n/a
Textiles, wearing apparel & leather	4,4	-3,1	n/a
Construction			
Local sales of cement	0,6	1,5	-0,8
Value of buildings permits authorised	8,2	-2,6	4,6
Volume of buildings permits authorised	4,3	-8,7	0,1
Retail Sales			
Volume Index of total retail sales	6,6	-0,6	7,6
Food, drinks and tobacco	1,0	2,5	1,6
Clothing and textiles	-1,4	-0,8	20,1
Vehicles, machinery and spare parts	11,5	-9,6	7,2

As far as the construction sector is concerned, signs of recovery are emerging and the prospects for next year appear to be improving. In particular, despite the decline of 0,8 per cent recorded by the local sales of cement, both the volume and value of building permits authorised - the main leading indicators of future construction activity - recorded a positive growth rate reversing the fall that occurred the year before. Specifically, the value of building permits authorised grew by 4,6 per cent in the period January-September 2000 compared with a fall of 2,6 per cent in the corresponding period of 1999, while the volume of building permits authorised grew by 0,1 per cent, as against a fall of 8,7 per cent recorded in the first nine months of

the previous year. Another encouraging development that took place in the construction industry in the first nine months of the year, was the fall in the sector's unemployment by 16,9 per cent.

The manufacturing sector showed quite clear signs of recovery during the year so far, with the volume index of total manufacturing production rising by 5,3 per cent. Most subsectors of manufacturing displayed significant increases with the notable exception of textiles and leather which recorded large declines, underlining the loss of competitiveness that characterises these industries in recent years. In comparison, industrial exports of manufacturing and agricultural origin experienced an acceleration in the first nine months of the year, growing by 16,4 per cent and 18,9 per cent, respectively, while registered unemployment in the sector fell sharply, declining by 11,8 per cent.

On the expenditure side, domestic consumption expenditure - as proxied by the volume index of total retail sales - recorded a substantial acceleration and increased by 7,6 per cent, as against a fall of 0,6 per cent experienced in the first nine months of the previous year. More specifically, the volume indices of retail sales of clothing and footwear, of petrol stations, of supermarkets, of furniture, of electrical goods and appliances and of vehicles and spare parts displayed large expansions. During the same period, the volume indices of retail sales of the sectors of pharmacies and toys experienced declines, while the volume index of food, drinks and tobacco recorded a deceleration. The marked acceleration recorded by consumption expenditure during this period reflects, to some extent, the rise in consumer spending in anticipation of the increase in the standard rate of Value Added Tax, which eventually was raised from 8,0 per cent to 10,0 per cent as from July 1st 2000, as well as the increase in disposable income, partly due to the spill-over effects of the stock exchange boom during 1999 and the social relief measures which accompanied the increase in indirect taxes.

The most unfavourable, probably, development of the period under review was the very large acceleration recorded by the inflation rate. The Consumer Price Index (CPI) grew by 4,3 per cent, as against a rise of 1,3 per cent in the corresponding period of the year before. Both external and domestic factors, largely of a temporary nature, contributed to the CPI acceleration. In particular, high oil prices contributed directly to higher electricity prices, while the appreciation of the U.S. dollar and sterling

against the Cyprus pound further increased imported inflation. In addition, the prolonged drought that characterised weather conditions in recent years led to an adverse supply shock in the agricultural sector, raising the prices of

Table 2
Consumer Price Index
(1998=100)

Categories of Goods and Services	% change over corresponding period of previous year		Contribution to percentage change January - September	
	January - September			
	2000	2000		
Food & non-alcoholic beverages	6,7	1,2		
Alcoholic beverages & tobacco	9,8	0,2		
Clothing and footwear	0,6	0,1		
Housing, water, electricity and gas	5,8	1,2		
Furnishings, household equipment and supply	1,2	0,1		
Health	5,7	0,2		
Transport	4,8	0,8		
Communication	-10,0	-0,1		
Recreation and culture	0,3	0,0		
Education	4,1	0,1		
Restaurants & hotels	5,2	0,3		
Miscellaneous goods & services	3,7	0,2		
All items	4,3	4,3		

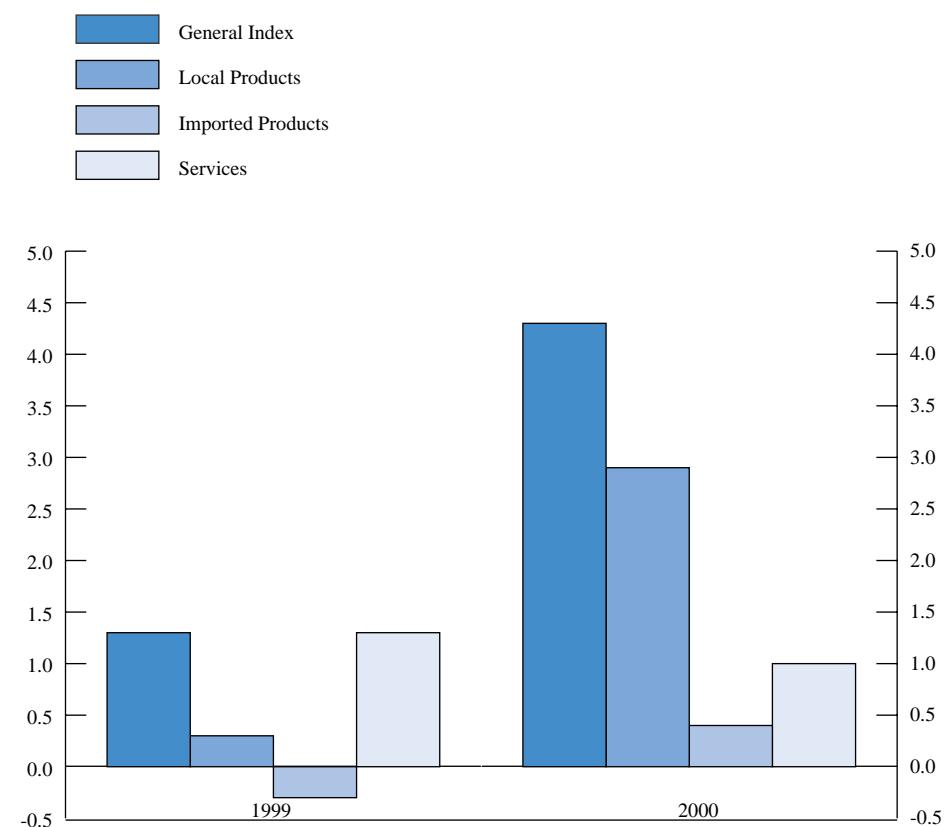

agricultural products across the board. Finally, the acceleration in domestic consumption spending led to increased demand pressures in the economy, contributing further to the upward inflationary spiral. From the analysis of the CPI by type of commodity, it is evident that the biggest price increases were displayed by the sectors of alcoholic beverages and tobacco, food and non-alcoholic beverages, and housing, water, electricity and gas, while the sector of communication experienced a large price reduction, mainly as a

result of the reductions announced by Cyprus Telecommunication Authority on international call charges. Looking now at the breakdown of the CPI by economic origin it is deduced that 2,9 percentage units of the total increase in inflation are attributed to the rise in the prices of local products, 0,4 of a percentage unit to the rise in imported product prices and 1,0 percentage unit to the increase in the prices of services. It should be noted however, that this

Chart 1

CPI by Economic Origin, January - September 1999-2000: Contribution to Percentage Change

(quarterly; weighted)

breakdown is quite misleading, since oil prices are not included in the group of imported products in the classification above, but instead, they are incorporated in the local products group, as part of the general production process.

Chart 2

Distribution of Unemployment: January - September 2000

(average of monthly data)

In the labour market, unemployment as a percentage of the economically active population fell marginally to 3,5 per cent in the first nine months of the year, partly reflecting the improvement in economic activity that was observed during 2000. The number of registered unemployed recorded a decline in the sectors of manufacturing, of finance, insurance, real estate and business services and of construction, by 11,8 per cent, 17,7 per cent and 16,9 per cent, respectively. In contrast, unemployment in the remaining sectors increased. The most notable increases in unemployment were observed in the community, social and personal services sector, the trade, restaurants and hotel sector and in newcomers to the labour market which were of the order of 11,5 per cent, 5,3 per cent, and 9,9 per cent, respectively.

PUBLIC FINANCES

Public Finances recorded a marked improvement in the period January - September 2000, with the fiscal deficit falling to £69,1 million, as against £132,2 million in the corresponding period of the previous year. This development reflects the accelerated growth rate recorded by total revenue and grants which by far exceeded the expansion of total expenditure and net lending and came mostly as a result of the successful implementation of the government's fiscal consolidation plan, the increase in various tax rates and, also, because of certain extraordinary factors which boosted revenue, such as the sale of shares held by the government in two public corporations.

Consolidated Revenue

Total revenue and grants grew by 21,2 per cent and reached £1280,1 million in the first three quarters of 2000, compared with an increase of 7,0 per cent or £1056,2 million in the first nine months of 1999. Both direct and indirect tax revenue recorded accelerated growth rates, but the largest increase, by far, was recorded by other revenues.

Specifically, direct tax receipts increased by 20,1 per cent as against 13,9 per cent in the first nine months of 1999. This was basically the result of the acceleration displayed by income tax receipts, which rose by 19,7 per cent, as against a growth rate of 7,3 per cent recorded in the period January - September 1999, while other direct taxes also experienced an acceleration and grew by 20,9 per cent.

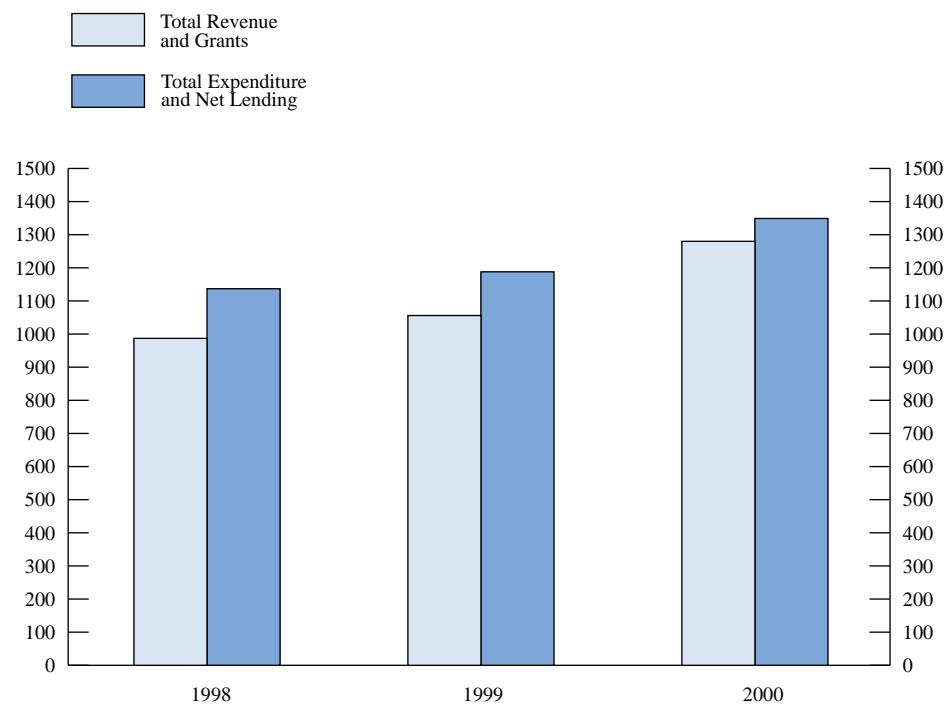

Indirect taxes grew by 15,1 per cent, as against 5,2 per cent in the

corresponding period of 1999, reflecting the acceleration experienced by both Value Added Tax (VAT) receipts and excise tax revenue. In particular, VAT receipts grew by 23,9 per cent in the first three quarters of the year, as against 3,1 per cent in the same period of 1999. This was the result of both the increase in the basic VAT rate, from 8,0 per cent to 10,0 per cent, as from 1st July 2000 and the expansion in private consumption observed throughout

Chart 3

Revenue and Expenditure: January - September 1998-2000

(£ million)

the period under review. Furthermore, receipts from excise taxes grew by 33,0 per cent, compared with 1,5 per cent the year before. This particularly strong acceleration in receipts from excise taxes was the outcome of the increase of certain excise tax rates, approved by the House of Representatives in autumn 1999, the full impact of which was felt in 2000. On the other hand, receipts from import duties remained at about the same level as in the previous year.

Non-tax revenue also grew significantly and reached £251,9 million compared with £164,7 million in the period January - September 1999, exhibiting a rise of the order of 52,9 per cent. This expansion is explained by the introduction of the stock exchange fee, which raised £36,9 million in

Fiscal Surplus (+)/Deficit(-)	-150,3	-132,2	-69,1

revenue up to September, 2000, the sale of shares owned by the government in the Cyprus Tourist Development Company Ltd., and the reduction of state shareholding in Cyprus Airways in line with Stock Exchange Regulations, which produced, in total, revenue of the order of £34,9 million.

Consolidated expenditure

Total expenditure and net lending grew by 13,5 per cent in the first nine months of 2000, compared with 4,5 per cent recorded in the corresponding period of the year before, as both current and capital expenditure experienced an acceleration. Overall, current expenses grew by 14,2 per cent, as against 4,4 per cent the year before. Spending on goods and services advanced by 12,8 per cent compared with a decline of 4,0 per cent recorded in the period January - September 1999, reflecting both a substantial increase in defence expenditure and a 9,3 per cent increase in wages and salaries as against 4,5 per cent the year before. The increase in wages and salaries is largely attributed to the increase in the basic wages and salaries of public sector employees by 2,0 per cent for the year 2000, and by 1,0 per cent, retrospectively, for 1999.

Subsidies also recorded a marked acceleration and grew by 50,0 per cent, as against an increase of 23,3 per cent in the first nine months of 1999, reflecting mainly the increase in subsidies extended to oil companies which, for the period January-September 2000, reached £14,0 million.

Capital expenditure experienced an acceleration and grew by 6,8 per cent in the period January - September 2000, as against a growth rate of 2,9 per cent recorded the year before. This development reflects the acceleration in investment expenditure, which grew by 13,0 per cent, compared with a growth rate of just 3,6 per cent the year before. On the other hand, capital transfers experienced a decline of 9,3 per cent.

Financing

The financing requirement of the government was reduced significantly during the period January-September 2000, due to the substantial improvement in public sector finances. Net domestic borrowing was the only source of finance for the government in this specific period, reaching £192,9 million, up from £8,9 million in the corresponding period of the year before. In particular, long-term domestic borrowing, which was mainly in the form of net sales of development stocks, grew by £119,1 million as against £65,5 million in the first nine months of 1999, while short-term borrowing, grew by £73,8 million more than reversing the £56,6 million decline recorded the year before. More specifically, the Central Bank reduced its holdings of development stock by £6,0 million, while deposit

money banks and the private sector increased their respective holdings by £70,3 million and £54,4 million. As far as treasury bills are concerned, the Central Bank and the private sector increased their holdings by £41,2 million

Chart 4

Financing Sources: January - September 1998-2000
 (£ million)

and £16,9 million, respectively, while deposit money banks reduced their holdings by £99,8 million.

Net foreign borrowing, on the other hand, ended in a net repayment of £20,5 million, as both long-term and short-term net foreign borrowing recorded an absolute decline. In particular, net issues of Eurocommercial paper declined by £8,7 million while long-term loans recorded a net

repayment £11,8 million compared with net proceeds of the order of £139,0 million in January-September 1999, when there was a new issue of European Medium-Term Notes of £160,0 million. Finally, other sources of finance declined by £103,3 million, reflecting mainly the net repayments of £88,7 million recorded by sinking funds.

EXTERNAL TRANSACTIONS DURING THE PERIOD JANUARY -SEPTEMBER 2000

OVERVIEW

Unfavourable developments during the first nine months of 2000 adversely affected external transactions and led to a deficit in the current account. Despite the significant growth of total exports of goods and the sharp rise in the perennial invisible account surplus, the current account

Table 1
Balance of Payments Summary
(£ million)

	January - September		
	1998	1999	2000 (prov.)
Exports fob	413,3	380,7	406,9
Imports fob	-1.261,6	-1.254,3	-1.597,1
Trade Balance	-848,3	-873,5	-1.190,2
Invisible receipts	1.421,1	1.561,0	1.917,2
Invisible payments	-609,9	-663,0	-792,5

Note: Because of rounding there may be slight discrepancies between the totals shown and the sum of constituent items.

(1) Exports (Total) = (Domestic Exports + Re-exports) - Shipstores.

(2) Imports (Total) = Imports for home consumption + Imports destined for re-exports.

balance deteriorated, mainly on account of the considerably faster growth of imports of goods associated with stronger demand conditions and higher oil prices. The abovementioned developments led to a current account deficit of £65,5 million.

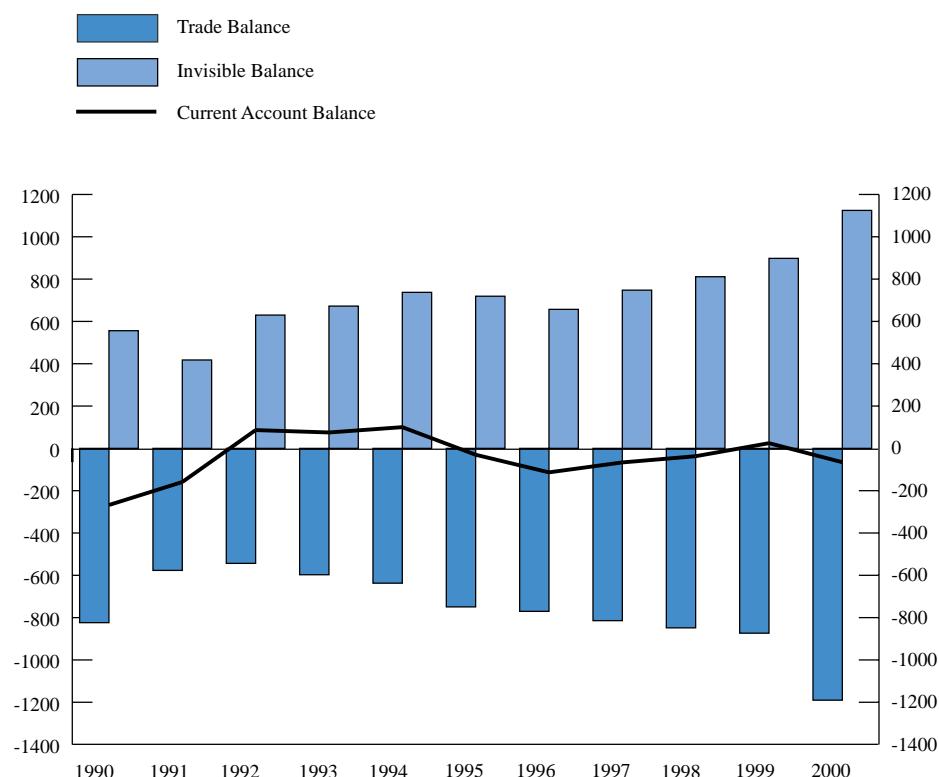

Analytically, foreign trade transactions resulted in a deficit of £1.190,2

million in January - September 2000, compared with a deficit of £873,5 million a year earlier. The trade gap was maintained despite the recovery of exports of goods which was linked with the appreciation of the US dollar and the UK pound versus the euro and, hence, versus the Cyprus pound. Total exports grew by 12,2 per cent to £457,9 million, compared with a

Chart 1

The Current Account Balance

(£ million; January - September)

decrease of 7,0 per cent in the first nine months of 1999, while domestic exports and re-exports amounted to £172,0 million and £234,9 million, respectively, rising by 11,9 per cent and 3,0 per cent, respectively. Total imports rose by 27,3 per cent to £1.781,2 million, compared with a decrease of 0,5 per cent in the corresponding period of the previous year. Imports for home consumption grew by 27,9 per cent to £1.465,5 million and were

influenced, in addition to the rise in demand in anticipation of a hike in the VAT rate, by higher oil prices and the depreciation of the Cyprus pound vis-à-vis the US dollar and the UK pound.

With respect to services, invisible payments during the first nine months of the year grew at a slower pace than invisible receipts, though both exhibited a significant acceleration when compared to their growth rates in the corresponding period of the previous year. More specifically, invisible receipts - led by substantial increases in revenues from tourism and offshore activity - advanced by 22,8 per cent to £1.917,2 million, compared with an increase of 9,8 per cent a year earlier. Invisible payments during the first nine months of 2000 registered a growth of 19,5 per cent and reached £792,5 million, as against an increase of 8,7 per cent in the corresponding period of the previous year. As a result of this, the surplus in the invisible account widened by £226,7 million and reached £1.124,7. The net result of the trade and invisible accounts was a deficit in the current account of £65,5 million.

The direction, though not the magnitude, of net capital movement in the year under review was in line with that in the corresponding period of the previous year with a net capital inflow of £2,4 million, compared with a net capital inflow of £39,4 million during January - September 1999. The overall balance, with positive errors and omissions of the order £19,7 million, ended with a deficit of £43,4 million.

TRADE ACCOUNT

Exports

Reversing the downtrend observed during the first nine months of 1999, total exports during January - September 2000 grew by 12,2 per cent. Domestic exports grew by 11,9 per cent to £172,0 million, compared with a decline of 7,6 per cent in the corresponding period of the year before. This increase is attributed to the rise in the exports of industrial products of both agricultural and manufacturing origin as well as of minerals and industrial products of mineral origin. On the other hand, agricultural exports declined by 3,4 per cent, compared with a fall of 12,7 per cent in the corresponding period of the year before. The share of agricultural products in total domestic exports fell from 20,8 per cent in January - September 1999 to 17,9 per cent during the period under review. A downward trend characterised some of the main items within this category of products. Depressed prices in international markets coupled with the drought conditions led to a further

Note: Because of rounding there may be slight discrepancies between the totals shown and the sum of constituent items.

decrease in revenue from potatoes, the most important agricultural export commodity. Specifically, earnings from potato exports declined by 9,7 per cent to £12,3 million, compared with a decrease of 27,2 per cent observed in the corresponding period of 1999. Additionally, receipts from other vegetables, fresh, frozen or dried declined to £2,3 million, while revenue from exported citrus fruit remained essentially stagnant at £11,2 million. Mineral exports registered an increase of 4,4 per cent during the first nine months of 2000 and amounted to £8,4 million, compared with a decline of 0,4 per cent during January - September 1999.

Chart 2

Domestic Exports by product category

(January - September)

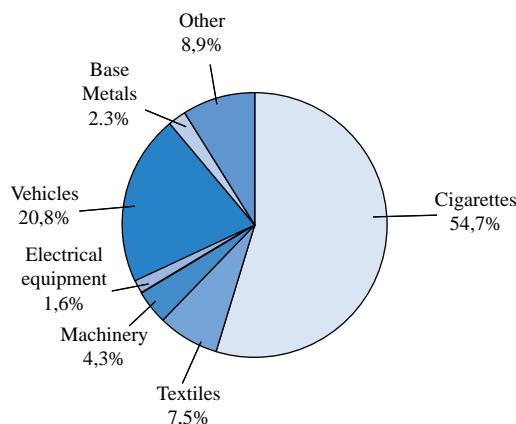

Exports of industrial products of both manufacturing and agricultural origin displayed a mixed record, though most categories of exported industrial products exhibited positive growth rates. The overall increase in exports of manufactured goods during January - September 2000 was 16,4 per cent. Analytically, exports of furniture and articles of paper or of paperboard experienced impressive positive growth rates during the period under review and amounted to £5,9 million and £3,7 million, respectively. Exports of cigarettes rose by 28,0 per cent to £12,8 million, compared with an increase of 7,1 per cent a year earlier. Receipts from exports of cement grew by 50,5 per cent and reached £8,6 million, following a marginal growth rate of only 0,6 per cent in the corresponding period of the previous year. Exports of pharmaceutical products, by far the largest manufacturing export, rose sharply, increasing by 24,2 per cent to £22,1 million in January - September 2000, compared with an, also, robust increase of 18,8 per cent during January - September 1999. All of the main sub-categories of exports

of industrial products of agricultural origin - with the exception of beer and wines - exhibited positive growth rates. Analytically, halloumi cheese, fruit preserved and fruit and vegetable juices advanced by 38,3 per cent, 9,2 per cent and 17,1 per cent , respectively, while exports of beer and wines declined by 8,8 per cent and 5,3 per cent, respectively.

Chart 3

Re-exports by product category

(January - September)

Turning to re-exports, a moderate rise was recorded from £228,0 million in 1999 to £234,9 million in 2000, representing a 3,0 per cent increase. Re-exports of cigarettes, by far the largest category of re-exports, decreased by 3,9 per cent to £128,6 million, compared with £133,9 million during the corresponding period in 1999. This was mostly due to a significant contraction recorded in re-exports to Bulgaria - one of the most important destinations for cigarettes. In comparison, there was a very substantial increase of re-exports of vehicles and textiles by 34,3 per cent and 50,0 per cent, respectively, to £48,9 million and £17,6 million, respectively. The recorded increase in re-exports of vehicles is associated with higher re-exports to the United Kingdom which advanced by 37,5 per cent to £43,8 million.

Imports

In contrast to the decline observed in the first three quarters of 1999, total imports advanced by 27,3 per cent to £1.781,2 million during the period

January - September 2000. Reflecting the revival in economic activity and the appreciation of the US dollar against the euro and, hence, against the Cyprus pound, this increase of imports is chiefly ascribed to rises in both imports for home consumption and imports destined for re-exports. Imports for home consumption registered a very large increase of 27,9 per cent to £1.465,5 million, compared with imports of £1.146,2 million in the corresponding period of 1999. This increase was, mainly, associated with the increase in crude oil prices from an average of US \$18,0 in 1999 to an average of US \$29,0 in 2000 and, furthermore, the profits and the overall euphoria associated with the explosion in the stock exchange prices in late 1999 and the resultant wealth effect on import demand in 2000. Furthermore, the increase by 2 percentage points of the Value Added Tax (from 8,0 per cent to 10,0 per cent), which became effective as of 1st July 2000, was an important factor in explaining higher household purchases during the first half of 2000 via anticipation of higher vat rates later on in the year. Analytically, imports of consumer goods expanded by 19,5 per cent in the period under review to reach £408,0 million, up from a rise of 5,3 per cent in January - September 1999. Imports of durable consumer goods experienced the greatest growth among all other sub-categories of consumer goods rising by 23,3 per cent. They reached £73,5 million, compared with £59,6 million in 1999.

Imports of intermediate inputs, after a decrease of 6,8 per cent during the

Chart 4

Imports for home consumption by product category

(January - September)

first nine months of 1999, increased by 14,6 per cent to £487,6 million during the same period of the current year, reflecting mainly a revival in economic activity. All categories of intermediate inputs displayed positive growth rates. Imports of intermediate inputs for manufacturing expanded by 11,9 per cent to £292,4 million, compared with a decline of 11,3 per cent a year earlier. Imports of intermediate inputs for construction and mining as well as for agriculture grew by 15,6 per cent and 8,5 per cent to £79,4 million and £26,2 million, respectively, compared with declines of 1,1 and 4,8 per cent, respectively, in the corresponding period of the previous year. Finally, imports for transport and for storage and communication equipment advanced by 32,9 per cent to £33,0 million, following a rise of 46,8 per cent a year earlier. As a result of the above developments, the share of intermediate inputs in imports for home consumption equalled 33,3 per cent.

Imports of capital goods experienced an even faster growth rate compared with that of intermediate inputs, rising by 21,1 per cent to £171,7 million, following a decline of 5,2 per cent a year earlier. More analytically, imports of capital goods for the manufacturing sector expanded by 23,5 per cent to £47,2 million, while capital goods for construction and mining took a downward dive of 38,3 per cent to £11,1 million. Similarly, all other categories of capital goods experienced positive growth rates in the period under review though imports of transport equipment and parts thereof remained almost stagnant at £138,6 million. It is worth mentioning that the sub-category of passenger motor vehicles registered a sharp acceleration of 10,4 per cent to £56,8 million, apparently because many households hastened their car purchases influenced by the anticipation of a hike in the VAT rate at some time during the first half of the year.

International crude oil prices during the first nine months of 2000 rose sharply compared with prices in the corresponding period of the previous year. Additionally, further affected by an appreciation of the US dollar vis-à-vis the Cyprus pound, the average crude oil prices for the period - in terms of Cyprus pound - rose even higher. Thus, imports of fuel and lubricants during January - September 2000, increased by 110,6 per cent to £178,2 million, compared with a decrease of 1,3 per cent a year earlier. As a consequence, the relative share of the fuel bill in total imports gained 4,8 percentage points and reached 12,2 per cent.

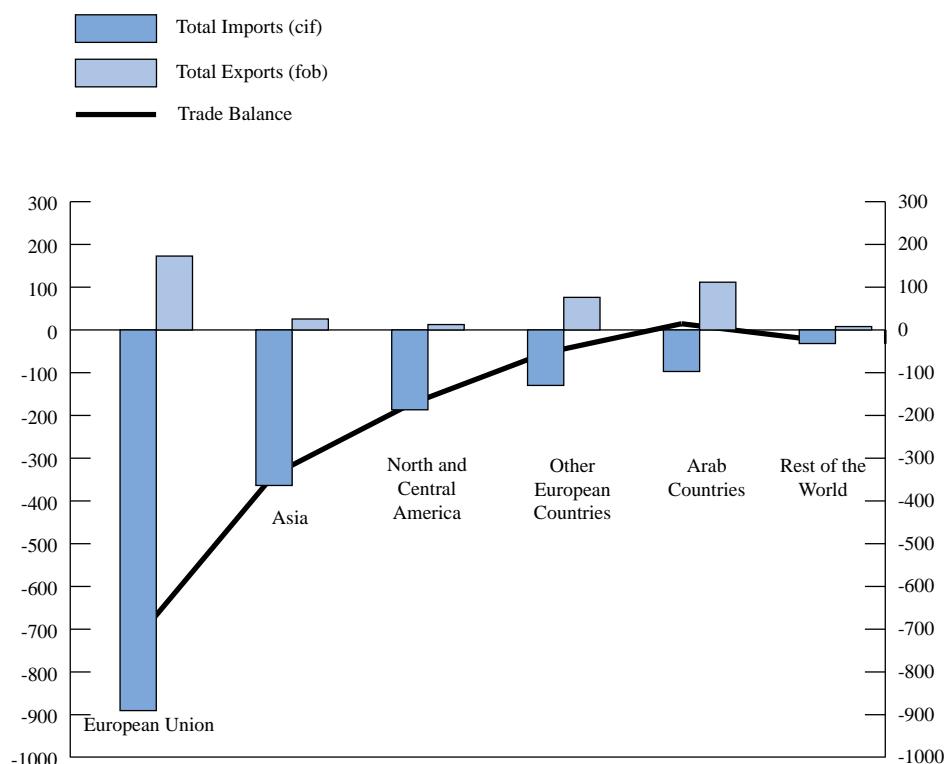

As far as the geographical distribution of trade is concerned, the deficit

of Cyprus with the European Union during January - September 2000 widened by £127,3 million to £717,7 million, reflecting the substantial growth in imports, mitigated in small part by a relatively smaller increase in exports. Imports from this region registered an increase of 18,5 per cent to

Chart 5

Foreign Trade by principal country group

(£ million; January - September 2000)

£890,4 million, compared with a decline of 0,4 per cent in the corresponding period of the previous year. However, the relative share of imports from this area in total imports lost 1,9 percentage points and reached 52,4 per cent. Exports to the European Union increased by 7,4 per cent to £172,8 million and, as a result, exports to this area represented 42,5 per cent of total exports (excluding shipstores), compared with 42,2 per cent a year earlier. Transactions with other European countries expanded significantly, with the trade account reaching a deficit of £53,6 million, compared with a deficit of

£7,7 million during January - September 1999. Furthermore, the trade surplus with the Arab countries decreased by £15,1 million to £14,5 million. Analytically, the share of imports from Arab countries in total imports rose to 5,7 per cent compared with 3,8 per cent a year earlier, while the share of exports to the Arab countries grew to 27,5 per cent compared with 21,6 per cent a year earlier. Exports to Asia declined by 30,3 per cent to £25,6 million, whilst imports from this area expanded by 23,0 per cent to £363,8 million. On the whole, trade with this geographical zone resulted in a widened deficit of £338,1 million, following a deficit of £259,0 million, a year earlier. Trade transactions with North and Central America and the rest of the world, in the period under review, resulted in an expanded trade deficit of £174,2 million and £23,9 million, respectively.

INVISIBLE ACCOUNT

Invisible transactions during the first three quarters of 2000 resulted in a

Table 4
Invisible Account
(£ million)

	January - September					
	1998		1999		2000 (prov.)

Total	1.421,1	609,9	1.561,0	663,0	1.917,2	792,5
Invisible Surplus		811,2		898,0		1.124,7

widened surplus of £1.124,7 million, up from £898,0 million the year before. Invisible receipts, reflecting to a large extent favourable movements on the receipts side of the travel account, reached £1.917,2 million,

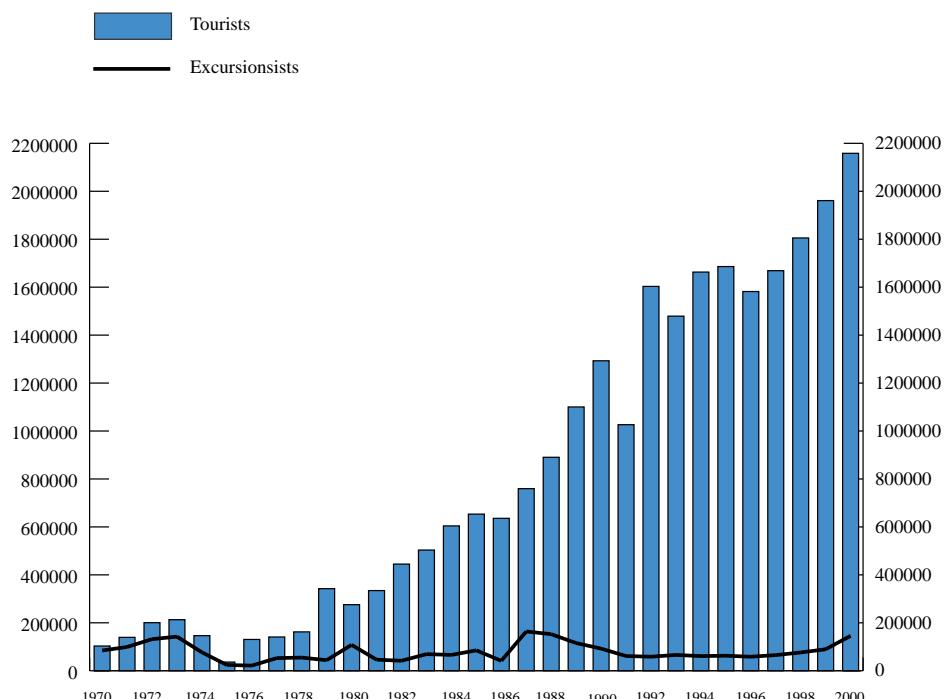

exhibiting a growth rate of 22,8 per cent whilst invisible payments grew by 19,5 per cent and amounted to £792,5 million.

Following the rapid growth of imports in the first nine months of 2000, freight and insurance payments advanced by 27,3 per cent to £177,5 million. Consequently, the deficit on this account expanded by £37,8 million and reached £170,3 million. The revenue of the other transportation account, mainly consisting of passenger fares, registered a rise of 38,3 per cent and

Chart 6

Number of tourist arrivals

(January - September)

reached £225,7 million whilst payments with respect to this account advanced by 18,2 per cent to £105,6 million. As a result, the traditional surplus on this account registered a huge increase of 62,5 per cent and reached £120,1 million. Boosted by the strong performance of the tourist sector, the travel account showed an enlarged surplus of £770,8 million, compared with a surplus of £649,7 million a year earlier. Revenue from

tourism increased by 16,4 per cent to £956,2 million reflecting an increase of 10,1 per cent in the number of tourist arrivals and a 12,5 per cent increase in the average expenditure per tourist. Analytically, tourist arrivals reached 2.158.400 persons while the average tourist expenditure amounted to £490,6. As far as the debit side of the travel account is concerned, a rise of 7,7 per cent in the expenditure of residents travelling abroad was recorded.

Receipts in the investment income account advanced by £63,8 million to £198,8 million , while payments from this account registered an increase of £53,6 million and totalled £213,4 million. As a result, a narrowed deficit of

Rest of the world	151.461	7,7	144.578	6,7	-4,5
Of which:					
USA	17.935	0,9	23.314	1,1	30,0
Israel	53.754	2,7	37.027	1,7	-31,1
Total	1.961.179	100,0	2.158.385	100,0	10,1

£10,2 million was recorded in this account, compared with a deficit of £24,8 million a year earlier. The surplus of the other goods, services and income account widened by £23,8 million to reach £344,9 million. The enlarged surplus emanated, mainly, from a rise in private receipts by £25,9 million - partly outweighed by an increase in private payments - while receipts and

payments from official transactions remained almost unaltered. Revenue from offshore activities in Cyprus advanced by £16,8 million to £192,0 million, compared with £175,2 million the corresponding period of the previous year. Finally, net transfers in the period under consideration displayed an increase of 596,2 per cent and totalled £73,8 million, compared with £10,6 million in January - September 1999.

Overall, the enlarged trade gap and the aforementioned widening of the surplus in the invisible account were sufficient to push the current account into a deficit of the order of £65,5 million during the first nine months of the year in comparison to a surplus of £24,4 million observed during the corresponding period of 1999.

CAPITAL ACCOUNT

Following the trend of the last three years, the outcome of the movements in the capital account during January - September 2000 was, again, a net capital inflow, though at a significantly lower level in comparison to that recorded during the corresponding period of 1999. The principal factor behind this was the reversal of the net outcome of both long-term loans and other long-term capital transactions. Transactions in long-term loans resulted in a net inflow of £2,9 million, compared with a net outflow of £131,0 million in the first nine months of the preceding year, mainly reflecting an increase in drawings on long-term loans by public corporations. Outflows with respect to other long-term capital experienced a decrease of £172,5 million resulting in a net outflow of £2,4 million. The net outcome with respect to short-term capital transactions was an inflow of £1,9 million, compared with a net inflow of £0,3 million a year earlier. As a result of the above developments the total net capital inflow narrowed considerably by £37,0 million to merely £2,4 million.

After taking into account of positive errors and omissions of the order of £19,7 million, the overall balance of payments ended up with a deficit of £43,4 million, compared with a deficit of £6,5 million during the corresponding period of 1999.

INTERNATIONAL RESERVES

Despite the overall balance of payments deficit, increased foreign currency deposits contributed in maintaining the upward trend of

international reserves. Total international reserves at the end of September 2000 reached £4.056,3 million, compared with £2.823,5 million in the corresponding period of 1999. Reserves held by deposit money banks during this period continued to grow and totalled £2.748,3 million, compared with £1.762,5 million at the end of September 1999. This sharp rise is attributed to the rising level of non-resident deposits. Moreover, official reserves held

Table 6
International Reserves
(end of month; £ million)

	1998		1999				2000		
	Dec.	Mar.	June	Sept.	Dec.	Mar.	June	Sept.

Total	2.315,7	2.335,1	2.662,8	2.823,5	2.960,5	3.194,5	3.552,7	4.056,3	

by the Central Bank, advanced by £243,8 million to £1.277,5 million. The Reserve Position in the IMF grew by £3,1 million to £29,8 million. As a result of the growth of total international reserves, the import coverage of reserves rose from 16,9 months at the end of September 1999 to 20,4 months at the end of September of the year under review.

MONETARY DEVELOPMENTS DURING THE THIRD QUARTER OF 2000 AND OUTLINE OF MONETARY POLICY FOR 2001

OVERVIEW

A significant acceleration was recorded by broad money during the third quarter of 2000, albeit from the low growth rate of the previous quarter. The major factor behind this faster growth was bank credit to the private sector which, in spite of the credit ceilings, exhibited a rapid growth over the previous quarter. Partly owing to the rise of the reserve requirements by one percentage point, the tight liquidity conditions observed in the second quarter continued into the third quarter. Market interest rates and yields on government paper remained broadly stable.

LIQUIDITY

Reflecting, primarily, the acceleration in secondary liquidity, total liquidity increased by £67,9 million during the third quarter of 2000, as compared with an increase of £29,1 million during the previous quarter. In seasonally adjusted annual growth terms, broad money grew by 4,6 per cent during the period July-September, as compared with 2,4 per cent during the previous quarter. Total liquidity during the first nine months of the year grew by 11,5 per cent on an annual basis adjusted for seasonality, compared with a rise of 13,5 per cent during the respective period in 1999.

Narrow money supply recorded a deceleration during the third quarter of 2000, as a result of the marked decrease in demand deposits. In particular, primary liquidity dropped by £76,8 million, as compared with a rise of £49,1 million during the same period in the previous year. Demand deposits dropped by £75,4 million, as against an increase of £42,8 million during the third quarter of 1999, while currency in circulation exhibited a marginal decline in the order of £1,3 million, compared with a rise of £6,2 million reported last year.

Secondary liquidity or quasi-money rose by £144,7 million, as against a decrease of £174,2 million in the previous quarter and a rise of £115,7 million recorded during July - September 1999. In seasonally adjusted annual growth rates, quasi-money increased by 12,4 per cent, compared with an expansion of 10,8 per cent during the third quarter of 1999. The

* The sign (-) denotes an increase and no sign denotes a decrease.

acceleration in secondary liquidity was mainly the result of an increase in time deposits, which expanded by £145,8 million, compared with a rise of £113,6 million in the third quarter of 1999. Savings deposits were up by £5,7 million, while foreign currency deposits of residents decreased by £6,8 million.

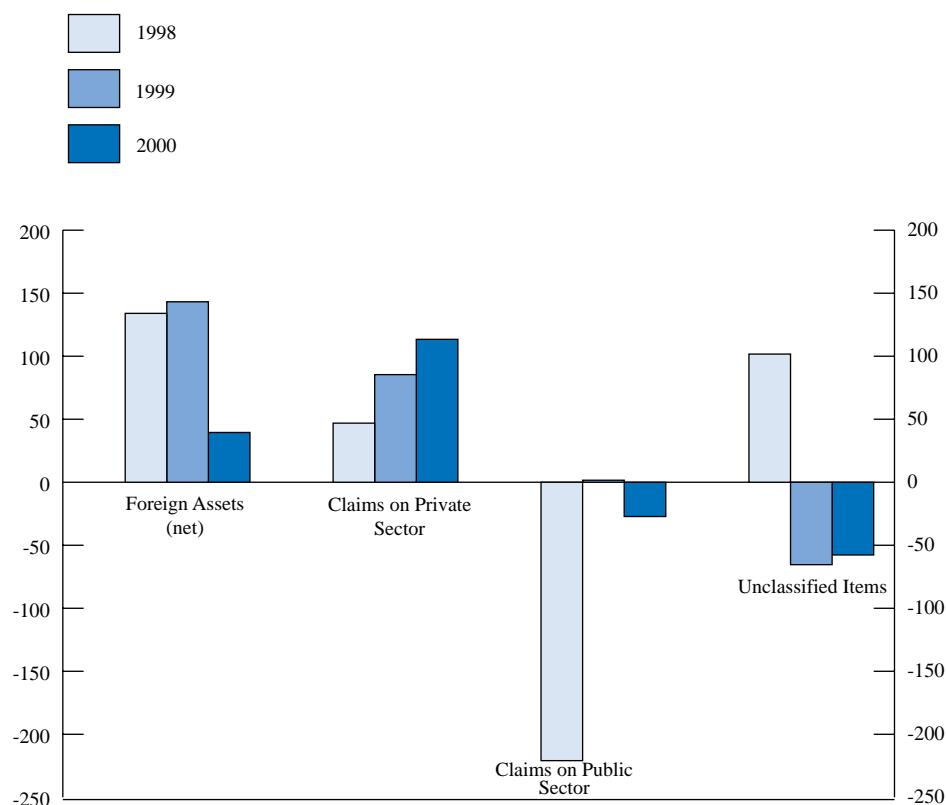

SOURCES OF MONETARY EXPANSION

Claims on the private sector continued to be the leading source of monetary expansion, while a positive, albeit smaller, impact was also induced by net inflows of foreign assets. In contrast, claims on the public sector as well as net unclassified items exerted a significant negative influence on total money supply.

Chart 1

Sources of Monetary Expansion: Third Quarter

(£ thousand; quarterly changes)

Despite the imposition of credit ceilings in June 2000, bank credit to the private sector recorded an acceleration registering a growth rate of 20,4 per cent in seasonally adjusted annual terms, from 8,2 per cent growth during

the previous quarter. In absolute terms, claims to the private sector increased by £113,4 million during July - September 2000, compared with a rise of £96,6 million during the second quarter of 2000 and £85,4 million during the third quarter of 1999.

The sectoral distribution of bank credit indicates that the bulk of total new credit was, once again, directed to personal loans, which by the end of September 2000 increased its share in total credit to 42,0 per cent, compared with 37,8 per cent a year earlier. In absolute terms, personal loans increased by £114,0 million, while new credit issued to foreign and domestic trade and

Chart 2

Credit Distribution by Sector

(percentage of total credit outstanding)

building and construction rose by £21,4 million and £12,6 million, respectively, compared with an increase of £3,0 million and a decrease of £10,7 million during the third quarter of 1999. The sectors of manufacturing, public institutions and corporations, and tourism displayed significant net credit repayments.

Net foreign assets continued to exert, although to a lesser extent, an upward pressure on money supply. Specifically, net foreign assets grew by £39,5 million, compared with an increase of £80,3 million during the previous quarter and a rise of £143,2 million during the third quarter of 1999. Adjusted for the influence of net foreign government borrowing, net foreign assets registered an increase of £52,2 million during the third quarter of 2000, compared with an increase of £145,2 million a year earlier.

A small contractionary influence on money creation was exercised by the financing operations of the government, indicating a liquidity leakage in the order of £27,2 million, as against a liquidity injection of £24,9 million in the previous quarter and of £1,6 million absorption during July - September 1999. Adjusted for the impact of net government borrowing from abroad, net

claims on the public sector during the period July - September 2000 decreased by £39,9 million, compared with a fall of £0,4 million a year earlier. Finally, net unclassified items resulted in a liquidity drain of £57,7 million, compared with a liquidity leakage in the order of £65,4 million during the third quarter of 1999.

THE MONEY MARKET

In contrast to its seasonal patterns, bank liquidity continued during the third quarter of 2000 to be tight, but showed signs of easing off. The progressive relaxation in liquidity conditions, evidenced by the reduced

Table 3
Central Bank Short-term Liquidity Operations
(£ million; average level)

	2000		
	July	August	September
Sales (+)/Purchases (-) of treasury bills by banks to/from the Central Bank under repurchase agreements (repos/reverse repos)	0,0	0,0	0,0
Short-term Central Bank facility (Lombard-type facility)	20,3	11,5	4,0
Overnight deposits of banks with the Central Bank	0,1	0,5	3,7

amounts obtained by banks through the short-term Central Bank facility (Lombard-type) which reached monthly averages in the order of £20,3 million, £11,5 million, and £4,0 million in July, August, and September, respectively. Pointing in the same direction were the small but steadily increasing amounts of excess funds that were placed in the overnight deposit facility, averaging £0,1 million in July, £0,5 million in August, and £3,7 million in September.

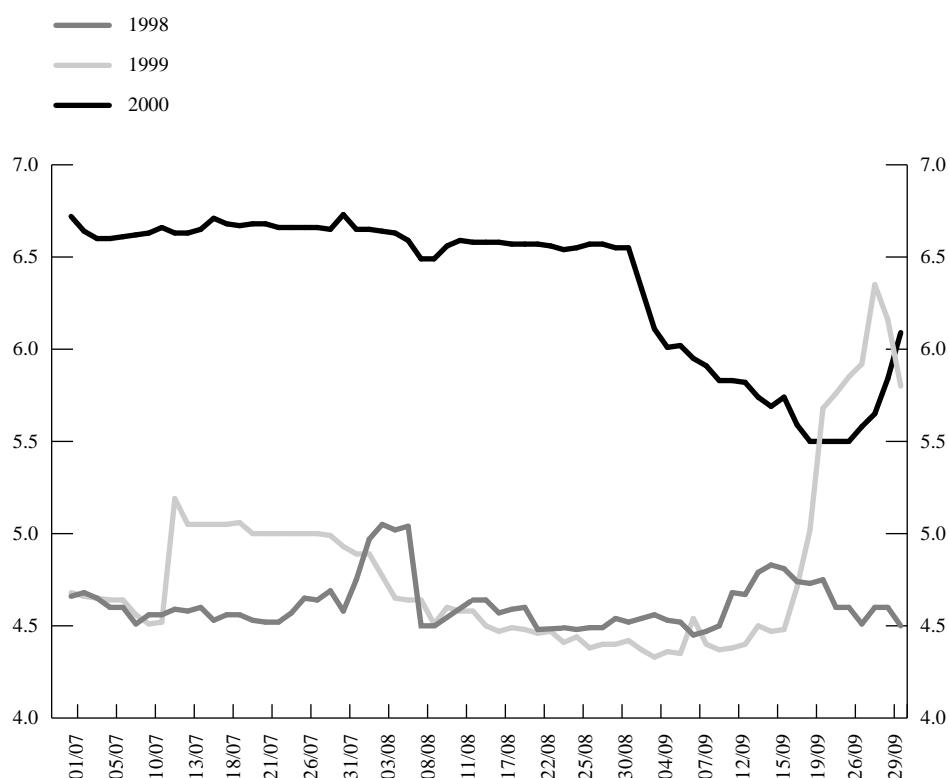

Interest rates remained broadly unchanged from the previous quarter's level. The interbank interest rates decreased marginally from an average of 6,36 per cent during the second quarter of 2000 to an average of 6,34 per cent during the quarter under review, reaching a maximum of 6,66 per cent

in July. The turnover in the interbank market averaged £224,2 million in July, £190,7 million in August, and £179,5 million in September, compared with £142,4 million, £58,4 million, and £67,8 million during the same months in 1999. Similarly, the yield on the 5-year development stock

Chart 3

Overnight Interbank Rates

(percentage; daily data)

remained virtually unchanged and stood at 7,46 per cent in September, compared with 7,45 per cent in June. At the longer end of the money market yield curve, the 10-year development stock yield moved upwards from 7,51 per cent in June to 7,60 per cent in September. The simple monthly average yield for the 13-week treasury bills rose to 5,88 per cent for the period August-September 2000 after eleven consecutive auctions at which no bids were placed, while for the 52-week government treasury bills auctions, no bids were placed throughout the period under review. As a result of the tight

liquidity conditions, total net sales of government securities (treasury bills and development stock) injected liquidity in the order of £17,8 million during the third quarter of 2000, compared with an absorption of £207,6 million during the corresponding period of the previous year.

MONETARY POLICY FOR 2001

The formulation of monetary policy for 2001 rested on the expectation of lower domestic and external demand which would, in turn, slow down GDP growth to 4,0 per cent from the 4,9 per cent growth recorded in 2000. The inflation rate was anticipated to decelerate to 2,0-2,5 per cent while at the same time full employment conditions were expected to be maintained. A significant improvement was also envisaged for the current account and the public deficit. Taking these considerations into account, credit expansion in 2001 was expected to be around 11,0 per cent or £675,0 million. The aforementioned credit growth was considered to provide sufficient liquidity for the economy in 2001 without at the same time placing an upward pressure on the prevailing level of interest rates.

In the light of the above, the newly-constituted consultative Monetary Policy Committee held its first meeting in December, recommending to the Board of Directors of the Central Bank to keep interest rates unchanged, with the Board adopting the recommendation.

(1) Monthly and quarterly figures do not necessarily agree with annual figures as valuation adjustments are only made at the end of each year.

(2) Fresh and dried grapes.

(3) Exclude domestic shipstores.

(1) Tourists and Excursionists

(2) Monthly and annual data for the period July 1991 to May 1997 are estimates prepared by the Statistical Service and the Cyprus Tourism Organisation. As from June 1997 data are based on a Survey conducted by the Statistical Service.

DEFINITIONS AND EXPLANATORY NOTES

1. Currency: Cyprus pound 1=100 cents. As from October 1, 1983 the hundred unit sub-division of the Cyprus pound was introduced in replacement of the thousand unit sub-division. Until June 18, 1992, the Cyprus pound was pegged to a basket composed of the currencies of Cyprus' major trading partners. As from June 19, 1992 the Cyprus pound is pegged to the ECU with a fluctuation band of ±2,25%.

2. Liquidity Ratio: Following the introduction of the system of credit regulations in the form of liquidity requirements applied to all banks, the table on bank liquidity has been extended to cover deposit money banks as well as other financial institutions with a view to providing a complete picture of the liquidity position of the banking system. Domestic liquid assets consist of local currency, balances with Central Bank and Treasury bills, and foreign assets (net) consist of foreign currency, foreign drafts, cheques and bills bought and balances with foreign banks (net).

With the introduction of the new monetary framework, beginning of 1996, the liquidity ratio has been discontinued.

3. Deposit money banks: Statistics cover the following banks: Bank of Cyprus Ltd., Arab Bank PLC, National Bank of Greece (Cyprus) Ltd., The Cyprus Popular Bank Ltd., Hellenic Bank Ltd., Alpha Bank Ltd., Co-operative Central Bank Ltd., Commercial Bank of Greece S.A., Universal Savings Bank Ltd.

4. Other Financial Institutions: Statistics cover the following institutions: Mortgage Bank of Cyprus Ltd., The Cyprus Development Bank Ltd., Housing Finance Corporation.

5. Total liquidity: Total liquidity consists of currency outside deposit money banks and demand, savings and time deposits held by the domestic private sector (including other financial institutions) and semi-official entities (public corporations and municipalities) with deposit money banks and the Central Bank.

6. Cyprus International Reserves: To enhance transparency, the Central Bank of Cyprus has adopted, as from 1.12.96, a new methodology for reporting its International Reserves. The revised methodology which is in

full accordance with International Accounting Standards is described herebelow:

- (a) Gold, which is included in “International Reserves”, is valued at market price in accordance with EMI’s recommendations. Under the old methodology, gold was valued at cost. From December 1996 to November 1997 the revaluation difference (72,3 million as at 31.12.96) appeared in a Special Reserve Account under “Capital and Reserves”.
- (b) During the same period, the Balance of the “Special Account for the Revaluation of Net Assets/Liabilities in Foreign Currencies (Agio)” (123,4 million as at 31.12.96) appeared in Liabilities as a separate item, instead of being deducted from “International Reserves”.
- (c) As from December 1997 a “Special Account for the Revaluation of Gold and Net Assets/Liabilities in Foreign Currencies” was introduced as a separate item under Liabilities comprising the “Special Reserve Account” (initially included in “Capital and Reserves”) and the “Special Account for the Revaluation of Gold and Net Assets/Liabilities in Foreign Currencies (Agio).”
- (d) Government Sinking Funds for the repayment of foreign debt (92,7 million as at 31.12.96) are included in Liabilities under “Deposits”, instead of being deducted from “International Reserves”.

It is evident from the above that the old accounting practice of deducting “Agio” and Government Sinking Funds (for the repayment of foreign debt) from International Reserves, was under-estimating the actual value of foreign exchange reserves held by the Central Bank of Cyprus. This underestimation amounted to 216,1 million as at 31.12.96.

As a result of the new accounting practices described above, the balance sheet value of the International Reserves of the Central Bank of Cyprus as at 31.12.96 has increased by 288,4 million.

The adoption of the new accounting practices has affected the balances (as from 31.12.96) of the following items in Tables 1, 12, & 31 of the Quarterly Economic Review.

Table 1 - International Reserves, deposits (Govt. & Govt. Agencies), other liabilities.

Table 12 - Foreign assets (official reserves), claims on public sector (govt. deposits), unclassified items.

Table 31 - Official reserves (Central Bank).

7. Interest Rates:

- (a) The maximum deposit rate was lowered from 7,0% to 6,5%, effective from 18th March, 1997.
- (b) The maximum lending rate was lowered from 8,5% to 8,0% for all new loans with effect 18th March, 1997, while the interest rate on existing loans was lowered to 8,0% with effect 18th July, 1997.
- (c) Banks may charge up to 8,5% for excesses on overdraft limits and on loan arrears (for the amount in arrears and for the period involved), while debit balances resulting from the use of credit cards may be charged up to 9,0%. Banks can also charge up to 9,0% on judgement debts, as well as on those accounts in respect of which legal proceedings have been initiated.

8. Consumer Price Index: As from January 2000, a new consumer price index has been introduced with 1998 as the base year and with weights based on a “Family Budget Survey 1996/97” conducted during the period September 1996 - August 1997.

The survey was carried out among a sample of 2 645 households residing in the urban and rural areas and for the first time all income groups were taken into account.

The formula used for the computation of the index is the weighted average of price relatives.

9. Quantity Index of Agricultural Production: Volume index number of agricultural production is published annually by the Statistical Service of the Ministry of Finance, and covers all agricultural commodities produced. For the computation of this index the Laspeyres formula is used, i.e. the volume of each commodity is weighted with its base-year price.

10. Industrial Production Index: Volume index number of industrial production is published annually by the Statistical Service of the Ministry of Finance, and covers Mining and Quarrying, Manufacturing, Gas and Electricity. Separate indices are compiled for each of the above industrial divisions and the final index is the weighted average of these individual indices. All indices are base weighted, computed according to the Laspeyres formula, and the weights used are proportional to the value added in the base-year at market prices.
